NEW DEDICATED VCPU CLOUD SERVERS WITH AMD EPYC™ CPUS AT A SENSATIONAL PRICE!

We would like to introduce you to our latest line of six dedicated vCPU Cloud servers. They give users un-shared vCPU power, and start at a sensationally low price, making them the best price-performance offer on the market! For example, the Cloud Server CCX13 with 2 vCPUs, 8 GB RAM, 80 GB NVMe SSDs and 20 TB traffic for only € 11.99 per month!

Level up the performance of your professional digital infrastructure and get your hands on one of your own CCX cloud servers. Profit from their dedicated vCPU resources and the latest processor generation from AMD EPYC™ “Genoa” and “Milan”. Since the vCPU cores are guaranteed to be configured exclusively for your use, you’ll experience consistent and stable performance, and will not be negatively affected by other users. That makes these models especially suitable for production-ready applications and enterprise-level processes, plus use cases that are compute-heavy and require low latencies. In addition to the included CPU, RAM, and storage, the plans’ traffic is based on a sliding scale, so the bigger the plan, the more traffic you get right now — up to 60 TB of it.

The new plans are available in all of Hetzner’s European and US data center locations. And as always, users can choose between our two flexible and transparent payment options: You can get these Cloud plans at a monthly price without any required minimum contract period, or if the server only exists for a smaller amount of time, we will only charge you the lower hourly fee.

Don’t compromise the integrity of your infrastructure! Let us impress you with the striking difference in the performance of these servers, all of which naturally support our full Hetzner Cloud feature set. A month after this launch, these new servers will completely replace our previous line of dedicated vCPU cloud servers.

Order yours now! (<https://www.hetzner.com/cloud#pricing>).
